EDUCATION

Indian Institute of Information Technology, Raichur <i>Bachelor of Technology in Computer Science and Engineering</i>	<i>August 2023 – May 2027</i> Karnataka
Jawahar Navodaya Vidyalaya, Katihar <i>Intermediate and Matriculation</i>	<i>August 2015 – June 2022</i> Bihar

EXPERIENCE

Seequenze Pvt. Ltd. <i>Web Developer Intern</i>	<i>January 2026 – Present</i> Remote
- Migrated the backend architecture from EC2 to serverless Lambda, reducing operational costs by 45% while handling 2k+ daily asynchronous executions with fault-tolerant retries and zero data loss. - Built a concurrent S3-based image pipeline processing 100+ images under 5 seconds, cutting transformation latency by 40% under burst workloads. - Architected an automated CI/CD pipeline to fetch AI-generated code from S3 and deploy builds via AWS Lambda, reducing deployment time by 60% from 5 mins to under 2 mins. - Developed the frontend interface using Remix.js, implementing an isolated iframe architecture to securely render real-time previews of generated code. - Automated live preview deployments via Netlify, implementing a 24-hour claim window for users to take ownership of their generated interfaces.	

PERSONAL PROJECTS

PodcastX – AI-powered podcast creation & discovery platform <i>Tech Stack: Next.js, TypeScript, TailwindCSS, PostgreSQL, Convex, Clerk</i>	<i>September 2025 – December 2025</i> GitHub Live Demo
- Built an AI platform that generates end-to-end podcast episodes with audio and cover art from text prompts in <60s, eliminating any recording or design overhead. - Implemented real-time synchronization with sub-second latency and secure webhook authentication, ensuring consistent state synchronization across multiple clients. - Orchestrated fault-tolerant AI pipelines with retry logic, exponential backoff, and API failure handling for stable inference workflows.	
QuickAi – Multimodal Generative AI Suite <i>Tech Stack: React.js, Node.js, Express, PostgreSQL, Clerk</i>	<i>July 2025 – August 2025</i> GitHub Live Demo
- Developed a multimodal SaaS integrating LLMs and computer vision to automate content and image generation across a unified inference pipeline. - Engineered a ledger-based PostgreSQL payment system using ACID-compliant transactions and to ensure correctness under concurrent writes. - Designed an NLP-powered resume reviewer with rate-limited APIs and strict input validation for secure and reliable inference.	
NoteSphere – Context-Aware Digital Brain & Organizer <i>Tech Stack: MERN Stack, TypeScript, Gemini API, Pinecone</i>	<i>May 2025 – June 2025</i> Github
- Built a RAG-based backend indexing 10k+ embeddings using Pinecone, enabling sub-150ms semantic retrieval via cosine similarity search. - Designed a hybrid MongoDB and vector embedding architecture for real-time ingestion and low-latency semantic search. - Built modular pipelines for embedding generation, query routing, and content extraction, reducing LLM API costs and improving throughput under high query load.	

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, TypeScript, SQL
Frontend: React.js, Next.js, Remix.js, TailwindCSS
Backend: Node.js, Express.js, REST APIs
Databases: PostgreSQL, MongoDB, DynamoDB, Pinecone
CI/CD & Tools: Jenkins, Git, Postman, Docker
Coursework: DSA, OOP, DBMS, Operating Systems, Computer Networks

ACHIEVEMENTS

- Ranked in the top **1.4%** globally on [LeetCode](#), solving **450+** DSA problems with strong proficiency in graphs, dynamic programming, and system design fundamentals.
- Contributed to open-source initiatives SWOC & [Elite Coders](#), improving production code reliability through bug fixes and code reviews.
